TaskMaster Deployment Guide – Vercel

Preparation

- Ensure the Vite app runs locally using npm run dev.
- Commit and push the project to a GitHub repository.

Deploying to Vercel

- Sign in to Vercel with GitHub.
- Create a new project and import the repository.
- Verify build command: npm run build.
- Verify output directory: dist.
- Click Deploy.

SPA Routing Fix

- Add a vercel.json file with rewrite rules to serve index.html for all routes.
- Commit and push changes to trigger redeploy.

PWA Verification

- Open the deployed site over HTTPS.
- Check Application tab in DevTools for manifest and service worker.
- Verify install prompt appears.
