TaskMaster Deployment Guide – Netlify

Preparation

- Ensure the app builds successfully using npm run build.
- Push the project to GitHub.

Deploying to Netlify

- Sign in to Netlify with GitHub.
- Import an existing project and select the repository.
- Set build command to npm run build.
- Set publish directory to dist.
- Deploy the site.

SPA Routing Fix

- Create public/_redirects file.
- Add rule: /* /index.html 200
- Commit and push to redeploy.

PWA Verification

- Access site via HTTPS.
- Verify offline support and installability.
- Inspect manifest and service worker in DevTools.
